

Teleflex is a global provider of medical technologies designed to improve the health and quality of people's lives. We apply purpose driven innovation – a relentless pursuit of identifying unmet clinical needs – to benefit patients and healthcare providers. Our portfolio is diverse, with solutions in the fields of vascular and interventional access, surgical, anesthesia, cardiac care, urology, emergency medicine and respiratory care. Teleflex employees worldwide are united in the understanding that what we do every day makes a difference. For more information, please visit [teleflex.com](http://teleflex.com).

Teleflex is the home of Arrow®, Deknatel®, Hudson RCI®, LMA®, Pilling®, Rüsch®, and Weck® – trusted brands united by a common sense of purpose.

## Accessories

### Guardian® II Hemostasis Valve

PRODUCT NO.	DESCRIPTION
8210	Guardian® II with Guidewire Insertion Tool
8211	Guardian® II with Guidewire Insertion Tool and VSI Torque Device
8215	Guardian® II NC with Guidewire Insertion Tool
8216	Guardian® II NC with Guidewire Insertion Tool and VSI Torque Device

Packaged in quantities of 25 units per box. Individual units are not sold separately.

The Guardian® Hemostasis Valves are intended to maintain hemostasis during the use of diagnostic or interventional devices. Guardian® Hemostasis Valves are indicated for maintaining a seal around diagnostic/interventional devices with outside diameters up to 8F (0.105" or 2.67mm) during diagnostic/interventional procedures. The torque device is provided as an aid for steering the guidewire within the vascular anatomy. The sidearm extension tubing included is provided to extend the sidearm of the Guardian® II or Guardian® II NC Hemostasis Valve.

### VSI Torque Device

PRODUCT NO.	DESCRIPTION
8181	VSI Torque Device

Packaged in quantities of 10 units per box. Individual units are not sold separately.

The VSI Torque Device is intended for use in manipulating a guidewire that is in the vasculature.

\*CO<sub>2</sub> must be used to inflate the balloon if there is a possibility that the balloon rupture would result in air embolism in the left heart or systemic circulations.  
See Instructions for Use prior to using air. Do not use any liquid to inflate balloon.

†Measured using contrast media with a viscosity of 8.4 cP/mPas at 37° C (at body temperature).

Packaged in quantities of 1 unit per case.

The Arrow® Balloon Wedge-Pressure Catheter is indicated for use in sampling blood for oxygen levels and measuring pressures in the right heart (including central venous pressure, right ventricular pressure, pulmonary artery pressure, and pulmonary artery wedge pressure). In the case of anatomical cardiac defects the catheter may be used in any chamber which can be entered from the right heart. The Arrow® Balloon Wedge-Pressure Catheter is also indicated for use in balloon occlusion femoral angiography (BOFA) of the contralateral leg for adult patients. The Arrow® Double-Lumen Balloon Wedge-Pressure Catheter is indicated for use in sampling blood for oxygen levels and measuring pressures in the right heart (including central venous pressure, right ventricular pressure, pulmonary artery pressure, and pulmonary artery wedge pressure). In the case of anatomical cardiac defects the catheter may be used in any chamber which can be entered from the right heart. In the Arrow® Double-Lumen Balloon Wedge-Pressure Catheter the second pressure lumen allows infusion of a solution with simultaneous measurement of pressure.

Packaged in quantities of 5 sets per case.

The Arrow® Berman Angiographic Catheter is indicated for use in right heart catheterization for cardiac angiography, and measurement of the right heart and pulmonary artery pressures. It can be used to inject radiopaque media and measure pressures in any chamber or vessel that can be entered from the right heart. The Arrow® Berman Angiographic Catheter is also indicated for use in Balloon Occlusion Femoral Angiography (BOFA) of the ipsilateral leg for adult patients.

Products with "S" or "KS" have shrouded connectors for sale in the U.S.

All catheter tips have right heart curves

\*Indicates the electrode width is 2 mm proximal and 1.6 mm distal

<sup>†</sup>Indicates product for sale outside of U.S.

Packaged in quantities of 5 kits per case. Individual units are not sold separately.

The Arrow® Temporary Pacing Catheter is indicated for use in temporary transvenous ventricular cardiac pacing when impulse formation or conduction is impaired.

Catheter body style: T – Higher Torque Control, FL – Flexi Torque (mid-range), and F – Flotation (softest)

Each package includes: Thermistor catheter, control stroke syringe, non-vented dust cap and extension line clamps.

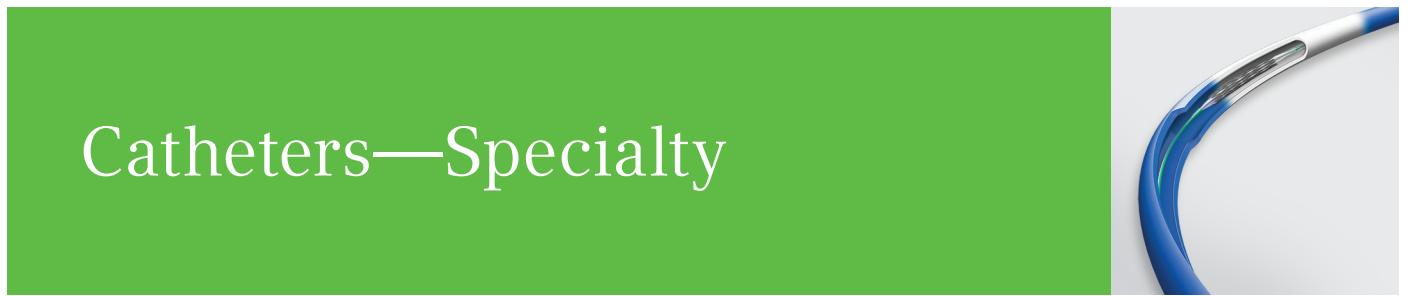

Packaged in quantities of 5 kits per case.

The Arrow® Thermodilution Catheter is indicated for use in measuring cardiac output by the thermodilution method. In addition, the thermodilution catheter can be used to measure right atrial pressure, right ventricular pressure, pulmonary artery pressure, pulmonary capillary wedge pressure, and continuous infusion of solutions.

The Twin-Pass® Torque Catheter is intended to access discrete regions of the coronary and/or peripheral vasculature. It may be used to facilitate placement and exchange of guidewires and to subselectively infuse/deliver diagnostic and therapeutic agents. The Twin-Pass® Catheters are intended to be used in conjunction with steerable guidewires in order to access discrete regions of the coronary and peripheral arterial vasculature, to facilitate placement and exchange of guidewires and other interventional devices, and for use during two guidewire procedures. The Twin-Pass® Catheters are also used to subselectively infuse/deliver diagnostic or therapeutic agents.

Packaged in quantities of 1 unit per box.

The Arrow-Clark™ VectorFlow® Antegrade Catheter is indicated for use in attaining long-term vascular access for hemodialysis and apheresis. The Arrow-Clark™ VectorFlow® Antegrade Catheter is inserted percutaneously and is preferentially placed into the internal jugular (IJ) vein. Alternately, this catheter may be inserted into the subclavian vein although the jugular vein is the preferred site. Catheters greater than 40 cm are intended for femoral vein insertion. The Arrow-Clark™ VectorFlow® Antegrade Catheter is intended for use in adult patients. The Arrow-Clark™ VectorFlow® Retrograde Catheter is indicated for use in attaining long-term vascular access for hemodialysis and apheresis. The Arrow-Clark™ VectorFlow® Retrograde Catheter is inserted percutaneously and is preferentially placed into the internal jugular (IJ) vein. Alternately, this catheter may be inserted into the subclavian vein although the jugular vein is the preferred site. Catheters greater than 40 cm are intended for femoral vein insertion. The Arrow-Clark™ VectorFlow® Retrograde Catheter is intended for use in adult patients.

Packaged in quantities of 1 unit per box.

The Arrow® NextStep® Antegrade Catheter is indicated for use in attaining long-term vascular access for hemodialysis and apheresis. The Arrow® NextStep® Antegrade Catheter is inserted percutaneously and is preferentially placed into the internal jugular (IJ) vein. Alternately, this catheter may be inserted into the subclavian vein although the jugular vein is the preferred site. Catheters greater than 40 cm are intended for femoral vein insertion. The Arrow® NextStep® Antegrade Catheter is intended for use in adult patients. The Arrow® NextStep® Catheter is indicated for use in attaining long-term vascular access for hemodialysis and apheresis. The NextStep® Catheter is inserted percutaneously and is preferentially placed into the internal jugular (IJ) vein. It may be placed into the subclavian vein also. The NextStep® Catheter is intended to be used only in adult patients.

Arrow Edge® Catheter is intended for use in adult patients.

### Arrow Simplicity® Micro-Introducer Set

PRODUCT NO.	DESCRIPTION
<b>Arrow Simplicity® Color-Coded Micro-Introducer Set includes:</b>	
MP-04450-AS	1 Introducer Needle: 21 Ga. x 2.75" (7 cm) thin wall echogenic tip needle with bevel indicator and green hub 1 Coaxial Sheath/Dilator: 4 Fr. x 4" (10 cm) 1 Micro-Introducer Wire Guide: 0.018" (0.46 mm) x 45 cm stainless steel guidewire with platinum coil and color band markings

Arrow Simplicity® Micro-Introducer Set can only be used with Arrow® Chronic Hemodialysis Catheters.

Packaged in quantities of 5 units per box. Individual units are not sold separately.

The Arrow Simplicity® Micro-Introducer Set is intended to introduce up to a .038" guidewire or catheter into the vascular system following a 21 Ga. needle stick.

## Closure Device

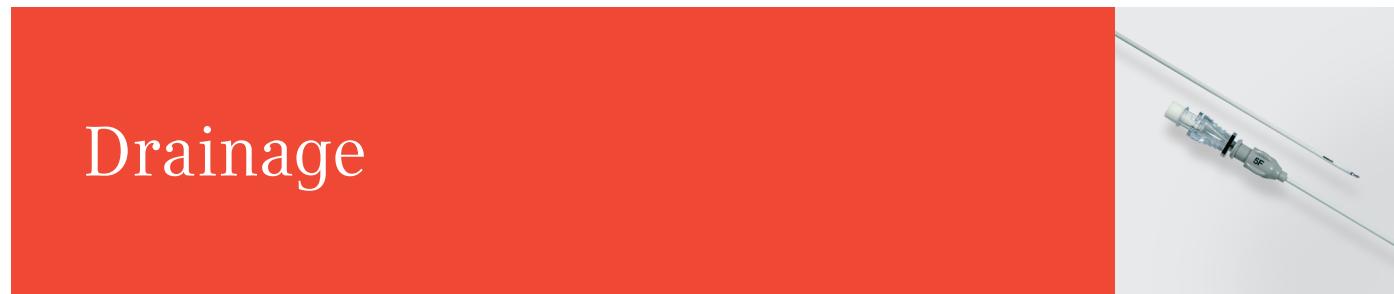

### MANTA™ Vascular Closure Device

PRODUCT NO.	DESCRIPTION	SIZE
2156	14 Fr. MANTA™ Vascular Closure Device	14 Fr.
2115	18 Fr. MANTA™ Vascular Closure Device	18 Fr.
188F	8 Fr. MANTA™ Depth Locator	8 Fr.

Packaged in quantities of 5 units per box.

The MANTA™ Vascular Closure Device is indicated for closure of femoral arterial access sites while reducing time to hemostasis following the use of 10-20F devices or sheaths (12-25F OD) in endovascular catheterization procedures. **CONTRAINDICATIONS:** There are no known contraindications to the use of this device. **WARNINGS:** 1) Do not use if the puncture site is proximal to the inguinal ligament or above the most inferior border of the epigastric artery (IEA), as this may result in retroperitoneal bleeding. 2) Do not use in patients with severe calcification of the access vessel and/or common femoral artery stenosis resulting in a vessel 50% diameter femoral or iliac artery stenosis. 3) Do not use in patients with severe peripheral vascular disease, as evidenced by severe claudication when ambulating 40 kg/m2 or 180 mmHg that cannot be lowered prior to access site closure. 19) Do not use in patients who cannot be adequately anticoagulated for the procedure. 20) Do not use the MANTA Device in patients with known allergies to bovine products, collagen and/or collagen products, polyglycolic or polylactic acid polymers, stainless steel or nickel. **PRECAUTIONS:** 1) The MANTA Device should only be used by a licensed physician or healthcare provider trained in the use of this device. 2) This device contains a small radiopaque stainless-steel lock that is implanted in the puncture tract. See MRI information in these instructions for use and patient implant card. 3) In the event that bleeding from the femoral access site persists after the use of the MANTA Device, the physician should assess the situation. Based on the physician assessment of the amount of bleeding, use manual or mechanical compression, application of balloon pressure from a secondary access site, placement of a covered stent, and/or surgical repair to obtain hemostasis.

**POTENTIAL ADVERSE EVENTS:** The following potential adverse events related to the deployment of Vascular Closure Devices have been identified: 1) Ischemia of the leg or stenosis of the femoral artery. 2) Local trauma to the femoral or iliac artery wall, such as dissection. 3) Retroperitoneal bleeding as a result of access above the inguinal ligament or the most inferior border of the epigastric artery (IEA). 4) Perforation of iliofemoral arteries, causing bleeding/hemorrhage. 5) Thrombosis formation or embolism. 6) Nerve damage or neuropathy. 7) Other access site complications leading to bleeding, hematoma, pseudoaneurysm, or arterio-venous fistula, possibly requiring blood transfusion, surgical repair, and/or endovascular intervention. Potential Adverse Events associated with any large bore intervention, including the use of the MANTA Vascular Closure Device, include but are not limited to: Arterial damage; Arterio-venous fistula; Bradycardia; Compartment syndrome; Death related to the procedure; Deep vein thrombosis; Ecchymosis; Edema; Infection at the puncture site which may require antibiotics or extended hospitalization; Inflammatory response; Late arterial bleeding; Oozing from the puncture site; Pressure in groin/access site region; Vessel laceration or trauma; Wound dehiscence.

7389	0.014"	0.009"	300 cm	Stainless Steel	20 cm	20 cm	2.5 cm	Straight	14 g

Packaged in quantities of 5 units per box. Individual units are not sold separately.

The Warrior™ Guidewire is intended for use in percutaneous procedures to introduce and position catheters and other interventional devices within the coronary and peripheral vasculature.

### R350™ Guidewire

MODE;	SHAFT O.D.	DISTAL TIP O.D.	LENGTH	CORE MATERIAL	HYDROPHILIC COATING LENGTH	COIL LENGTH	RADIOPAQUE TIP LENGTH	TIP SHAPE	TIP LOAD
7390	0.013"	0.013"	350 cm	Nitinol	200 cm	5 cm	5 cm	Straight	3 g

Packaged in quantities of 5 units per box. Individual units are not sold separately.

The R350™ Guidewire is indicated for use in percutaneous procedures to introduce and position catheters and other interventional devices within the coronary and peripheral vasculature.

## Hemostasis

### Thrombix® Topical Hemostat\*

PRODUCT NO.	DESCRIPTION
3100	Thrombix® Silver Topical Hemostat
3101	Thrombix® Topical Hemostat

Packaged in quantities of 25 units per box. Individual units are not sold separately.

### D-Stat Dry Silver® Topical Hemostat\*

PRODUCT NO.	DESCRIPTION
3000	D-Stat® Dry Silver Topical Hemostat
3005	D-Stat® Dry Clear Silver Topical Hemostat
3001	D-Stat® Dry Topical Hemostat
3006	D-Stat® Dry Clear Topical Hemostat

Packaged in quantities of 10 units per box. Individual units are not sold separately.

The D-Stat Dry Silver® Topical Hemostat is applied topically as an adjunct to manual compression and is indicated for the control of surface bleeding from vascular access sites and percutaneous catheters or tubes and reducing the time-to-hemostasis in patients undergoing diagnostic endovascular procedures utilizing 4-6 Fr. Introducer sheaths. D-Stat Dry Silver® Topical Hemostat contains silver chloride to prevent microorganisms commonly encountered in the clinical setting from colonizing on the pad.

### D-Stat® 2 Dry Hemostatic Bandage

PRODUCT NO.	DESCRIPTION
3010	D-Stat® 2 Dry Hemostatic Bandage

Packaged in quantities of 10 units per box. Individual units are not sold separately.

The D-Stat® 2 Dry Hemostatic Bandage is intended for use under the direction of a healthcare professional for the local management and control of bleeding from vascular access sites and percutaneous catheters and tubes.

### D-Stat® Clamp Topical Hemostat Accessory\*

PRODUCT NO.	DESCRIPTION
3030	D-Stat® Clamp Topical Hemostat Accessory

Each D-Stat® Clamp Topical Hemostat Accessory includes a D-Stat® Dry Topical Hemostat Pad.

Packaged in quantities of 5 units per box. Individual units are not sold separately.

The D-Stat® Clamp Topical Hemostat Accessory is indicated for the use with the D-Stat® Handle, CompressAR® Universal System (Advanced Vascular Dynamics) and the Femoral Artery Vascular Clamp (Pressure Products) compression devices or as a stand-alone device to assist in the control of bleeding following catheterization or cannulation procedures. Following achieving hemostasis the D-Stat® Dry bandage may be detached from the D-Stat® Clamp accessory and left in place for up to 24 hours and is indicated for the control of surface bleeding from vascular access sites and percutaneous catheters or tubes.

**D-Stat® Flowable Hemostat\***

PRODUCT NO.	DESCRIPTION
4000	D-Stat Flowable Hemostat

Packaged in quantities of 5 units per box. Individual units are not sold separately.

**INDICATIONS:** The D-Stat® flowable is indicated for use under the direction of a healthcare professional for the local management and control of bleeding from vascular access sites and percutaneous catheters and tubes. The D-Stat® flowable is indicated for use as an adjunct treatment in sealing residual oozing of tissue tracts of femoral access sites that have been previously closed by suture/collagen-based hemostatic devices. D-Stat flowable is indicated for use in high-risk, anti-coagulated patients undergoing implantation of a pulse generator (e.g., pacemaker or ICD) to reduce the frequency of clinically relevant hematoma formation in the prepectoral pocket. High-risk patients are defined as those whose anticoagulation regimens will resume within 24 hours of implant. Clinically relevant hematomas are defined as those that result in an alteration in the standard of care resultant of hematoma formation including alteration (i.e. suspension or discontinuation) of the anticoagulant therapy regimen (Heparin, LMWH, Coumadin or Plavix), application of a compression bandage and evacuation of the hematoma.

**CONTRAINDICATIONS:** The D-Stat® is contraindicated in persons with known sensitivity to bovine-derived materials.

**WARNINGS:** The effectiveness of D-Stat® flowable to reduce the frequency of prepectoral pocket hematomas in patients on Coumadin therapy that have an INR >2.0 has not been established. Do not inject the D-Stat into blood vessels. Extensive intravascular clotting and even death may result. Intravascular delivery of flowable hemostatic agents has been reported. Appropriate imaging should be used when delivering hemostatic agents near vasculature. Do not use the D-Stat in the closure of skin incisions because it may interfere with the healing of the skin edges due to mechanical interposition of collagen. Do not use the D-Stat if pulsatile arterial blood flow is observed at the femoral artery access site previously closed by suture/collagen-based hemostatic device. This may indicate incomplete closure of the arteriotomy and may result in inadvertent intraarterial injection of the D-Stat. The acute onset of severely diminished or absent pulses in the limb treated with the D-Stat may indicate that inadvertent intraarterial injection has occurred. If this is suspected, immediately perform appropriate diagnostic and therapeutic procedures for thrombus dissolution/removal. Do not use the D-Stat to treat residual oozing of a femoral artery access site tissue tract if a venous sheath was placed directly adjacent to the site. Inadvertent venous injection may occur. The safety and effectiveness of D-Stat has not been established for use to control bleeding following organ or tissue biopsies. Use of D-Stat in this situation has been reported to result in pain, seizures, bile retention, tissue necrosis, vascular occlusion and death..

**ThrombiDisc™ Topical Hemostat\***

PRODUCT NO.	DESCRIPTION
4150	ThrombiDisc™ Topical Hemostat

Packaged in quantities of 25 units per box. Individual units are not sold separately.

The ThrombiDisc™ Topical Hemostat is applied topically as adjunct to manual compression and is indicated for the control of surface bleeding from vascular access sites and percutaneous catheters or tubes. ThrombiDisc™ Topical Hemostat contains silver chloride to prevent microorganisms commonly encountered in the clinical setting from colonizing on the pad.

\*All Topical Hemostat products listed above are contraindicated in persons with known sensitivity to bovine-derived materials.

\*Sheathless insertions without hemostasis device. \*\*Wire-reinforced catheter body.

Not made with natural rubber latex. The products above are also available in multiple languages.

There are three primary indications for IABP use: acute coronary syndrome, cardiac and non-cardiac surgery and complications of heart failure.

**Arrow® Intra-Aortic Ballon Pump Accessories**

PRODUCT NO.	DESCRIPTION
<b>Replacement Insertion Kits</b>	
IAK-06845	Replacement insertion kit for use with 30 and 40 cc UltraFlex™, Ultra®8, FiberOptix® IAB Catheters
IAK-S7IT	Replacement insertion kit for use with RediGuard® 30 cc IAB catheters
IAK-S8IT	Replacement insertion kit for use with RediGuard® 40 cc IAB catheters
<b>Adaptors and Driveline Tubing</b>	
IAK-02691	Driveline tubing with pre-attached Arrow 30 cc pump connector for use with Arrow pump consoles, fiber optic, and fluid-filled 30 cc IAB catheters
IAK-02692	Driveline tubing with pre-attached Arrow® 40 cc Pump Connector for use with Arrow® Pump Consoles, and all Arrow® 40 cc IAB Catheters
IAK-02263	Driveline tubing for use with Datascope® Balloon Pumps and fiber optic 30 cc and 40 cc IAB catheters
<b>Additional Accessories</b>	
IAA-09004	Chart Paper (Box of 10)
IAA-00170	IV pole mounting bracket for AC2 AutoCAT2WAVE and AutoCAT2
IAA-00171	IV pole mounting bracket for AC3 Optimus® IABP
IAA-00437	5 Lead EKG Cable Assembly
IAA-03270	0.025" x 175cm Teflon® Coated - 3mm "J" Extra Stiff Wire Guide*
IAU-00100	Extra IABP Battery Set
IAH-09145	Disposable Helium Adaptor
28-3000-001	Yellow Fiber Connector
<b>Helium</b>	
IAH-09045	Helium, 33 liter, 500 psi (4 per box)
IAH-09048	Helium Tank, 105 liter (each)
<b>Operator and Service Manuals</b>	
IAM-9007	AutoCAT2WAVE® Operators Manual
IAM-9008	AutoCAT2WAVE® Service Manual
IAM-9010	AC3 Optimus® Operators Manual
IAM-9011	AC3 Optimus® Service Manual

Packaged in quantities of 1 unit per box.

\*Packaged in quantities of 5 units per box

PRODUCT NO.	DESCRIPTION
<b>IAB StatLock® Stabilization Device</b>	
IB0200	StatLock® Stabilization Device

Packaged in quantities of 20 units per box. Individual units are not sold separately.

There are three primary indications for IABP use: acute coronary syndrome, cardiac and non-cardiac surgery and complications of heart failure.

**Arrow® Intra-Aortic Balloon Pumps**

PRODUCT NO.	DESCRIPTION
<b>AC3 Optimus™ IABP System includes:</b>	

IAP-0700	<ul style="list-style-type: none"> <li>• FiberOptix® Sensor Technology</li> <li>• WAVE® Algorithm: Physiologically based proprietary timing algorithm</li> <li>• Aortic flow timing method</li> <li>• AutoPilot® Mode of operation</li> <li>• Touchscreen</li> <li>• Dynamic Startup Checklist</li> <li>• Therapy Report</li> <li>• Improved Ergonomics</li> </ul>
----------	--

**Simulators**

IAT-00025	Balloon-in-Tube Simulator
IAT-00201	Universal Patient Simulator
IAT-09844	Low Level AP Cable

There are three primary indications for IABP use: acute coronary syndrome, cardiac and non-cardiac surgery and complications of heart failure.

# Implantable Ports

**Arrow® Polysite® Low Profile Hybrid Ports**

PRODUCT NO.	DESCRIPTION	SILICONE FILLED SUTURE HOLES	WITH SAFETY SHEATH	PRESSURE INJECTABLE (5 ML/SEC AT 300 PSI)	SIZE	CATHETER ID	FLOW RATE*
<b>Polysite® Low Profile Hybrid Ports Micro 2000 Series</b>							
2016SPI	Polysite® Pressure Injectable Implantable Infusion Port with 6 Fr. 45 cm Attachable ChronoFlex® Catheter	✓	✓		6 Fr.	1.30 mm	1327 mL/h
2016PI	Polysite® Pressure Injectable Implantable Infusion Port with 6 Fr. 45 cm Attachable ChronoFlex® Catheter		✓		6 Fr.	1.30 mm	1327 mL/h

<b>Polysite® Low Profile Hybrid Ports Standard 4000 Series</b>							
4018SPI	Polysite® Pressure Injectable Implantable Infusion Port with 8 Fr. 60 cm Attachable ChronoFlex® Catheter	✓	✓		8 Fr.	1.70 mm	2042 mL/h
4018PI	Polysite® Pressure Injectable Implantable Infusion Port with 8 Fr. 60 cm Attachable ChronoFlex® Catheter		✓		8 Fr.	1.70 mm	2042 mL/h
4018SC	Polysite® Implantable Infusion Port with 8 Fr. 80 cm Attachable ChronoFlex® Catheter	✓			8 Fr.	1.70 mm	1913 mL/h
4018C	Polysite® Implantable Infusion Port with 8 Fr. 80 cm Attachable ChronoFlex® Catheter				8 Fr.	1.70 mm	1913 mL/h

\*Flow rate (mL/h) using 19 Ga. Huber needle

Packaged in quantities of 1 unit per box.

Polysite® PI Implantable Infusion Ports are indicated for long-term access to the central venous system and allow for repeated vascular access. Polysite® PI Implantable Infusion Ports can be used to administer chemotherapy, antibiotics and antiviral drugs, as well as for parenteral nutrition, collection of blood samples and transfusion of blood or blood products. Polysite® PI Implantable Infusion Ports also can be used for high pressure injection of contrast media during diagnostic studies. The maximum flow rate of power injector equipment used with the pressure injectable port may not exceed 5 mL/sec (300 psi). For high pressure injection of contrast media, a high pressure non-coring needle must be used to access the Polysite® PI Implanted Port. The manufacturer recommends the use of a PPS PI™ (Pressure Injectable) Safety Non-Coring Huber Needle.

## Arrow® Percutaneous Sheath Introducers

PRODUCT NO.	SHEATH SIZE	SHEATH LENGTH	GUIDEWIRE DIAMETER	GUIDEWIRE LENGTH	GUIDEWIRE DESCRIPTION	COLOR-CODED HUB
<b>Percutaneous Sheath Introducers</b>						
CP-08403*	4 Fr.	7.5 cm	0.021"	45 cm	Dual purpose (straight soft tip on one end, J-tip on the other end)	Pink

PRODUCT NO.	DESCRIPTION
7216	Hemostasis Valve Adaptor

The Hemostasis Valve Adaptor will attach to any standard size luer lock and will accept 8 Fr. and smaller devices through its hemostasis valve.

Packaged in quantities of 10 units per box. Individual units are not sold separately.

The VSI Pedal Micro-Introducer Kit™ is used for percutaneous introduction of up to a 0.018 inch guidewire into the vascular system following a small gauge needle stick. The intended use of the Hemostasis Valve Adaptor is to minimize blood loss during the introduction of catheters or devices into the vasculature, and provide a side arm and three way stopcock to facilitate aspiration or infusion.

The Chocolate XD® PTCA Balloon Dilatation Catheter is indicated for balloon dilatation of the stenotic portion of coronary artery or bypass graft stenosis for the purpose of improving myocardial perfusion including in-stent restenosis.

Crossing profile is defined as the maximum diameter found between the proximal end of the balloon and the distal tip of the catheter. The numbers above represent the average crossing profile (N=15 units) of each Chocolate XD® PTCA Balloon Catheter diameter.

The Glider™ PTCA Balloon Dilatation Catheter is indicated for balloon dilatation of the stenotic portion of coronary artery or bypass graft stenosis for the purpose of improving myocardial perfusion. The Glider™ PTCA Balloon Dilatation Catheter is contraindicated for unprotected left main coronary artery and coronary artery spasm in the absence of a significant stenosis.

Crossing profile is defined as the maximum diameter found between the proximal end of the balloon and the distal tip of the catheter. The numbers above represent the average crossing profile (N=15 units) of each Glider™ PTCA Balloon Catheter diameter.

## Radial Support

### Accumed™ Wrist Positioning Splints

PRODUCT NO.	DESCRIPTION
3560	Accumed™ II Wrist Positioning Splint
3565	Accumed™ LP Wrist Positioning Splint

Packaged in quantities of 10 units per box. Individual units are not sold separately.

The Accumed™ Wrist Positioning Splint is designed to optimally position and stabilize the hand, wrist and forearm for arterial puncture and support during radial artery catheterization.

Continued on page 41

Continued from page 40

### Accumed™ Radial Arm Board

PRODUCT NO.	DESCRIPTION
3250	Accumed™ Radial Arm Board with Accumed™ Splint Stabilizer

The Accumed™ Splint Stabilizer is compatible with the Accumed™ Wrist Positioning Splint.

Packaged in quantities of 1 unit per box.

The Accumed™ Radial Arm Board is intended to position a patient's arm during a catheterization procedure.

The Transradial Artery Access devices are intended for use for percutaneous introduction of devices into the radial artery for diagnostic and therapeutic purposes.

### D-Stat® Rad-Band® Topical Hemostat

PRODUCT NO.	DESCRIPTION
3501R	D-Stat® Rad-Band® Topical Hemostat

The D-Stat® Rad-Band® is contraindicated in persons with known sensitivity to bovine-derived materials.

Packaged in quantities of 10 units per box. Individual units are not sold separately.

The D-Stat® Rad-Band® is applied topically and is indicated for the control of surface bleeding from vascular access sites and percutaneous catheters or tubes.

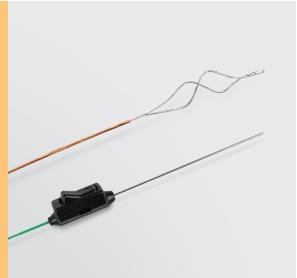

**Vasc Band™ Hemostat**

PRODUCT NO.	DESCRIPTION
3521	Short—21 cm
3524	Regular—24 cm
3527	Long—27 cm
3529	Extra Long—29 cm
3537	XXL—37 cm

Packaged in quantities of 10 units per box. Individual units are not sold separately.

The Vasc Band™ Hemostat is a compression device to assist hemostasis of arterial, venous and hemodialysis percutaneous access sites.

## Retrieval Devices

**Expro Elite™ Snare**

PRODUCT NO.	LOOP DIAMETER	LENGTH	O.D.	LOOP
8400	5 mm	150 cm	0.035"	Helical
8401	10 mm	150 cm	0.035"	Helical
